03 Notes (Compatibility Mode) - Word

1 UPDATES AVAILABLE Updates for Office are ready to be installed, but first we need to close some apps. Update now

or disk and shuttle pieces back and forth between them as needed.

- The needs of users can be met best by a computing environment that supports modular programming and the flexible use of data.
- System managers need efficient and orderly control of storage allocation.
- The operating system, to satisfy these requirements, has five principal storage management responsibilities:

**Simple Operating System:**

- ✓ In case of simple operating system only one program can run at a time in memory.

**Sophisticated Operating System:**

- ✓ Multiple programs can be executed in memory at the same time

**Input/Output device:**

- All computers have physical devices for acquiring input and producing output. Input and Output devices is Keyboard, monitor, printer.
- Every operating system has an I/O subsystem for managing its I/O devices. Some of the I/O software's are device independent.

**Files:**

- User should be able to create, modify and delete files. User should be able to share each other's file.
- The mechanisms for sharing files should provide various types of controlled access such as read access, write access execute access.

Elective Computer Graphics Study Material - Word

$\Delta y = m \cdot \Delta x$

- Similarly for  $\Delta x$ :  
 $\Delta x = \Delta y / m$
- For line with slope  $|m| < 1$ ,  $\Delta x$  can be set proportional to small horizontal deflection voltage and the corresponding vertical deflection voltage is then set proportional to  $\Delta y$  which is calculated from above equation.
- For line with slope  $|m| > 1$ ,  $\Delta y$  can be set proportional to small vertical deflection voltage and the corresponding horizontal deflection voltage is then set proportional to  $\Delta x$  which is calculated from above equation.
- For line with slope  $m = 1$ ,  $\Delta x = \Delta y$  and the horizontal and vertical deflection voltages are equal.

**• DDA Algorithm**

- Digital differential analyzer (DDA) is scan conversion line drawing algorithm based on calculating either  $\Delta y$  or  $\Delta x$  using above equation.
- We sample the line at unit intervals in one coordinate and find corresponding integer values nearest the line path for the other coordinate.

Consider first a line with positive slope and slope is less than or equal to 1.

## DEPARTMENT OF DIGITAL PRINT MEDIA

### 2017 Onwards

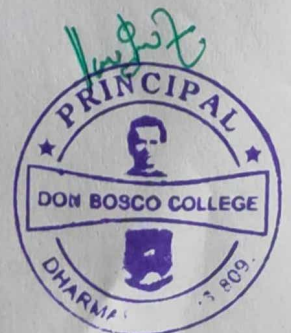

#### ICT Usage:

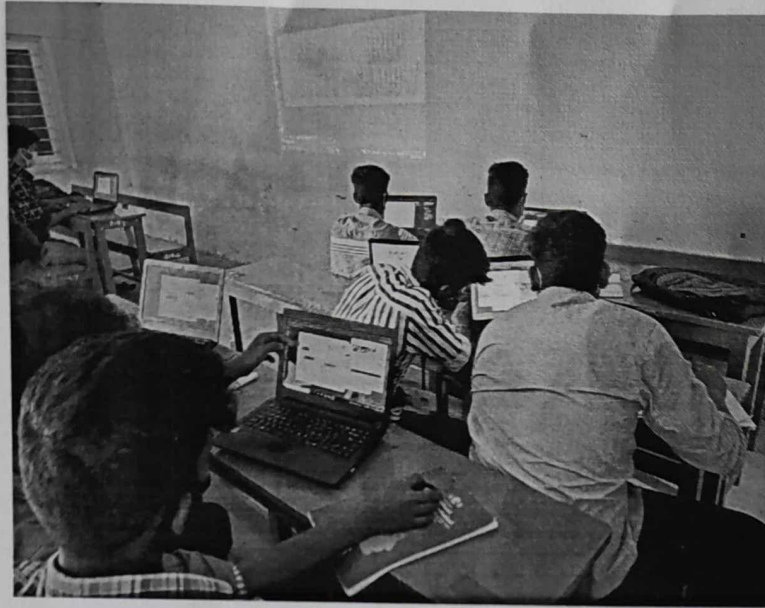

- In our department 'Digital Print Media' most of the classes are handled using projector as Graphic Designs software's play a major role in our department.
- We maintain all our notes as E-Content and using google drives all the notes are shared to the students.
- We have separate social media accounts for our department in Facebook, Instagram, and YouTube.
- We post our regular department activities in Instagram & Facebook which act as a promotion process for our admission also it maintains the link with our past-pupil.
- Videos of short film competition, department ads, subjects-based videos by our staffs are uploaded in YouTube.
- We also handle classes using Google class room during the covid circumstances.
- Handling of scanners are made familiar to the students.
- Most of our students will have their own laptop.

#### Usage of Projector during class:

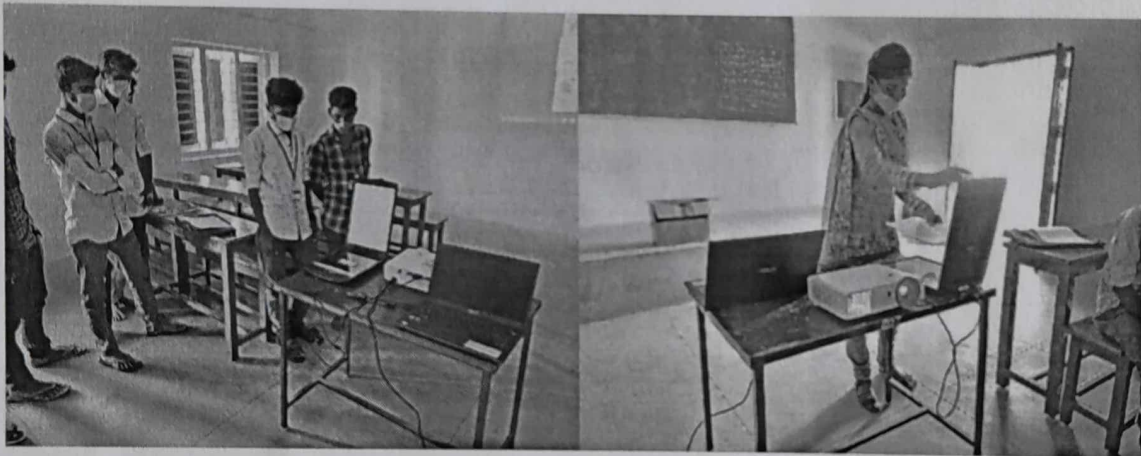

#### Students using Laptops:

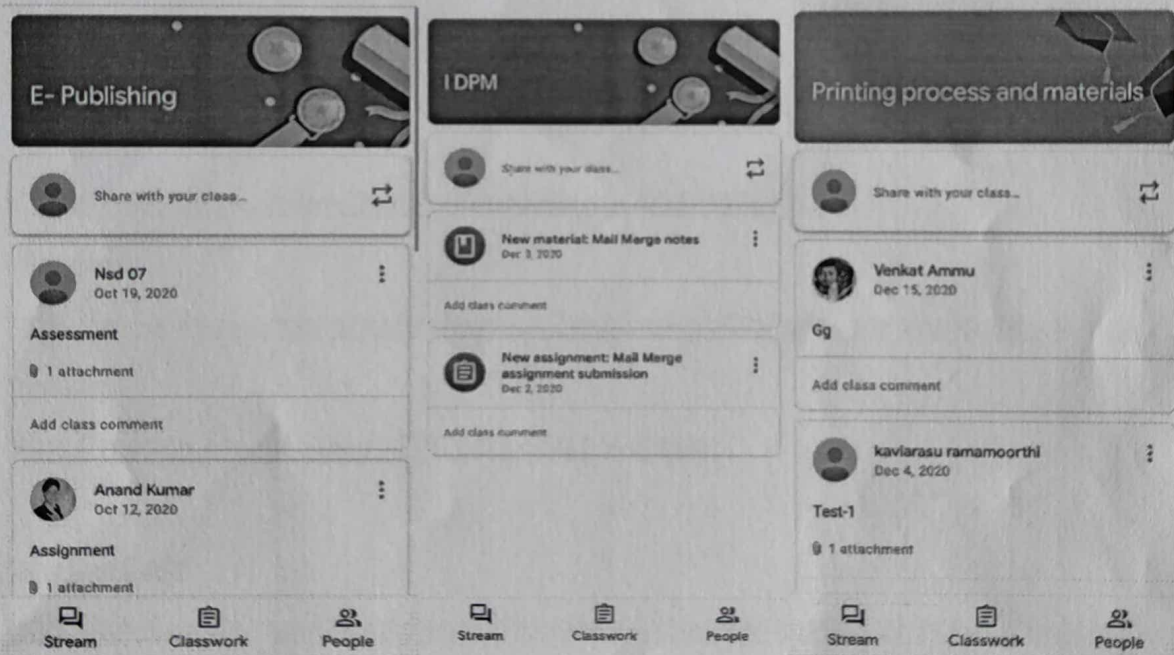

Students practicing Scanning process:
